

Product Specification Sheet

Zour Tool (2 Different thicknesses)

Product Description:

The Zour tool is used to make forcible entry into outward swinging doors equipped with or without a latch plate guard, but not an activated dead bolt, faster and much less destructive than traditional means. The Zour tool is slid into the gap between the door and door frame that either exists or is created by the first responder, and slid downward. As the tool maintains contact with the jamb, the gradual sloping edge allows the latch bolt to be pushed back into the door.

The
ZOUR
Tool

Product Features and Specifications:

- Appropriately sized to fit between the typical gap that exists in between a commercial outward swinging single door and its frame.
- Latch plate guards negate traditional means causing an increase in times associated with forcing these types of doors.
- Minimal training required
- Sized to be a personal tool
- 2 different thicknesses to allow for different clearances between door and frame
- Tapered working edge is the result of a continued commitment to product evolution as latch plate guard design changes.

Product Name	Zour Tool
Tool Material	Galvanized
Tool dimensions	18 ¼" x 8 ½"
Thickness (gap needed)	14 Ga Galv 24 Ga Galv
Handle customization	Available upon request
